**ALBANIAN CIVIL AVIATION AUTHORITY**

**SAFETY INFORMATION**

---

ACAA-DAN-SI-No.001

Issue: 01, Revision 01

Date: 15.05.2024

Approved by:

Maksim Et'hemaj

Executive Director of Albanian Civil Aviation Authority

### 0.1 Record of Amendments

The table below describes the dates and reason for the different amendments of the current procedure. A vertical black line on the left-hand side of the page identify the changes with the previous version.

Issue No.	Revision No.	Date	Amended by	Reason
01	00	07.11.2023		Initial Issue
01	01	15.05.2024		Revision as per ICAO State letter Ref.: E 3/5-24/54

## **Safety Information Bulletin - Aviation safety concerns regarding interference to the Global Navigation Satellite System (GNSS)**

GNSS, as one of the main enablers for performance-based navigation (PBN), provides navigation guidance for all phases of flight, from enroute through to precision approach. By providing accurate position and timing information, GNSS enables several systems critical to the safety of flight.

Recent GPS/GNSS jamming and spoofing activities reported by civil air operators operating globally pose a potential safety of flight risk to civil aviation. GPS/GNSS disruptions often occur in and around conflict zones, military operations areas, and areas of counter unmanned aircraft systems (UAS) protection.

Recently it has been observed concerning escalation of jamming and spoofing activities targeting the global navigation satellite system (GNSS), which have been increasingly in various regions globally.

The Albanian Civil Aviation Authority (ACAA) is committed to ensure the safety and integrity of aviation operations within the Albanian airspace. In line with this commitment, we are providing access to Safety Information Bulletin Number 2022-02R2, and the Federal Aviation Administration (FAA), Safety Alert for Operators (SAFO 24002).

### **Bulletin Overview:**

Safety Information Bulletin Number 2022-02R2 focuses on the increasing challenges associated with jamming and spoofing of GNSS signals. These disruptions can have severe consequences for aviation operations, affecting air traffic management, air navigation service providers, air operators, and aircraft and equipment manufacturers.

### **Key Points:**

- Description of GNSS jamming and spoofing.
- Areas affected by GNSS jamming and spoofing, including conflict zones, the Mediterranean, the Black Sea, the Baltic Sea, and the Arctic area.
- Symptoms of suspected GNSS spoofing.
- Recommendations and mitigating measures to address the identified issues.

**Federal Aviation Administration (FAA), Safety Alert for Operators overview:**

To improve analysis and dissemination of these issues, the FAA stresses the need for “real time” pilot reporting to ATC

Manufacturers, operators, and ATC should be aware of the general impacts of GPS/GNSS interference, jamming, and spoofing. such as:

- Inability to use GPS/GNSS for navigation;
- Loss of area navigation (RNAV) capability, to include required navigation performance (RNP);
- Inaccurate aircraft position on navigation display

Recommended Action: Prior to departure, operators should be aware of potential risk locations, check for any relevant Notices to Air Missions (NOTAMs), plan fuel contingencies, and research alternative conventional arrival/approach procedures at the destination and all alternate airports. When available, operators should plan to use conventional Navigational Aids (NAVAIDs) in these locations.

For a comprehensive understanding of the issues and recommended measures, we encourage all stakeholders in the aviation industry to download and review at the following link [Safety Information Bulletin Number 2022-02R2](#) and Federal Aviation Administration (FAA), [Safety Alert for Operators \(SAFO 24002\)](#).

ANSP and Air Operators should take into consideration the recommendation raised in the above mention information.

In the Annex 1 of this Safety Information is provided the recommendations from ICAO EUR/MID Radio Navigation Symposium.

**ICAO EUR/MID Radio Navigation Symposium  
Antalya, Turkey (6 to 8 February 2024)**

**RECOMMENDATIONS**

*Recognizing with concern the impact of global navigation satellite system (GNSS) Radio Frequency Interference (RFI) on aviation safety, capacity, efficiency and security, the Symposium recalled and underlined Resolution A1-8, Appendix C: Ensuring the resilience of ICAO CNS/ATM systems and services and agreed on the need to take necessary actions to ensure continued safe, reliable, and resilient air navigation.*

The Symposium recommended:

- **All Stakeholders** to be aware of the potential safety and capacity impacts of GNSS interference, jamming, and spoofing.
- **Civil Aviation Authorities (Albanian Civil Aviation Authority)** to ensure that air navigation service providers (ANSPs) deploy and maintain adequate distance measuring equipment (DME) infrastructure and DME based Performance-Based Navigation (PBN) procedures and enable aircraft operators use of multi-DME and multi-DME/inertial reference system (IRS) complementary solutions as appropriate to maintain PBN operations during GNSS local or regional interference, jamming or spoofing.
- **ACAA** to ensure that air navigation services providers (ANSPs) implement and maintain necessary minimum operational networks (MON), or greater, of navigation aids and radar infrastructures (including very high frequency omnidirectional radio range (VOR), instrument landing system (ILS) Cat I/II/III and DME) to ensure the necessary levels of resilience for navigation when core constellations, satellite-based augmentation system (SBAS) or ground-based augmentation system (GBAS) are unusable.
- **ANSP (Albcontrol Sh.a.)** to develop contingency procedures (technical and operational) for GNSS radio frequency interference (RFI) events, to minimize any operational impact and ensure continuous safe operation of air traffic. The contingency procedure may require the provision of reliable surveillance coverage that is resilient to GNSS interference.
- **ANSP** to implement/maintain a GNSS-independent time source for synchronisation of relevant Communications, Navigation and Surveillance/Air Traffic Management (CNS/ATM) infrastructure.
- **CAA/ANSP** to facilitate or deploy as appropriate real-time monitoring and detection solutions for GNSS RFI situational awareness for all stakeholders, while recognizing that only the aircraft operator is responsible for determining their ability to navigate.
- **ANSP** to issue notice to airmen (NOTAMs) on GNSS RFI events in a timely manner; to establish coordination arrangements with neighbouring flight information regions (FIRs) on how to best to share their navigation infrastructures in the event of GNSS RFI and any resulting air traffic diversion.
- **CAA/ANSP** to improve civil-military coordination to address interference risks associated with GNSS testing and conflict zones, to ensure the uninterrupted and reliable operation of navigation systems in diverse applications.
